

Ruby Velvet

Anigozanthos 'Ruby Velvet' (D) PRR

Ruby Velvet has an abundance of the reddest, most vibrant flowers of any Kangaroo Paw.

These will be a show piece in any garden or landscape. This is the shortest Kangaroo paw in the Velvet Range with good black spot resistance and tough clean foliage. As they are smaller, they need planting closer together or used as explained in the Amber Velvet mass planting tips.

Velvet's low growing paw

A showpiece in the garden

Its flowers reach 70cm to 80cm high, whilst its clean foliage is the smallest in the range, reaching only 30cm to 40cm high.

VELVET KANGAROO PAWS

DESCRIPTION	Stunning red flower
